

KISS & MAKE-UP

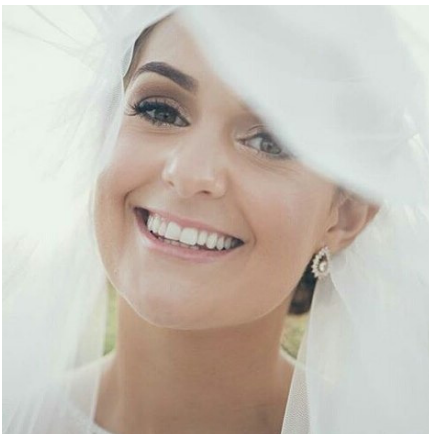

What is **AIRBRUSH MAKE-UP**?

A light-weight makeup applied through an air gun machine that produces a **thin, even layer of makeup** and creates a **very natural flawless appearance**.

Airbrush foundation is high in coverage, but thin in texture, offering a high-opacity or full coverage application that's dispersed as sheer and evenly as possible.

BENEFITS: Its great on Textured skins, Acne, Wrinkles, Open pores, pigmentation, scaring and doesn't need powdering or touching up. Since it's such a fine mist your true skin tone shows through which makes it so natural. Airbrush makeup is waterproof and lasts 24hrs.

The result is **perfect-looking skin achieved with a minimum of product**

If you have a normal smooth skin, you will notice a difference in feel (light weight) and wear (long lasting) But not always in sight as you will just look like you...Your skin will be flawless but won't look like you've got foundation on it.

I do however highly recommend Airbrushing on more textured skin as will feel, wear and see a huge difference.
